RONE PLUGINS
PLUGINS CENTER

Install the Center on your Mac

One minute, once. After this the Center installs and updates every RONE plugin for you.

1 Drag it into Applications

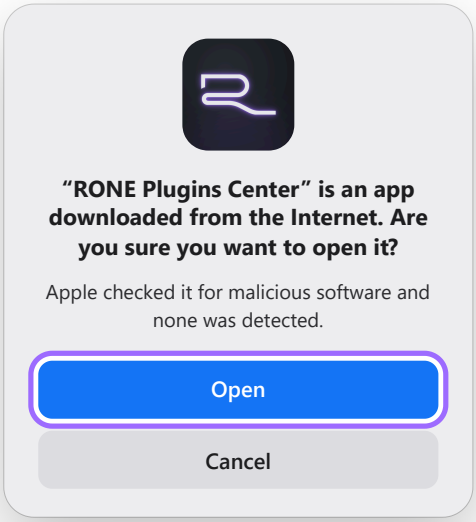

Open the **RONE_Plugins_Center.dmg** you downloaded. In the window that opens, drag **RONE Plugins Center** onto **Applications**. If macOS asks, choose **Replace**.

2 Open it

Open **RONE Plugins Center** from your Applications folder. macOS asks once, as it does for any app you download from the internet. Click **Open**.

> The Center is signed and notarized by Apple, so this is the only question macOS asks.

3 That's it

From now on the Center opens like any other app. Sign in, pick your plugins and press **Install** - no password: they go into your own `~/Library/Audio/Plug-Ins` and the apps into the Applications folder in your home. A plugin an older installer put in `/Library` asks for your Mac password once per update.

A plugin does not show up in your DAW? Rescan plugins once. In Logic: Audio FX → Audio Units → **RonePlugins**. In Ableton / FL Studio: the VST3 list under **RonePlugins**.

Stuck? Reply to the email you got from us, or write through the Support form at **roneaudio.com** - a real person answers.
